                                                                                                                                  NAL. SERUCE. BIOL. 9:750-755 (2002).

-I. FUNCTION: BINDS TOGETHER WITH $18 TO 16S RIBOSOMAL RNA.

-I. FUNCTION: BINDS TOGETHER WITH $18 TO 16S RIBOSOMAL RNA.

-I. FUNCTION: BINDS TOGETHER WITH $18 TO 16S RIBOSOMAL RNA.

OF CARBOXYL-TERMINAL GLUTAMIC ACID RESIDUES, WERE ISOLATED. THE SEQUENCE SHOWN IS FORM $6-6, WHICH IS THE LONGEST. THE FIRST 2 GLU ARE ENCODED BY THE RAPE FORD, THE OTHER GLU ARE ADDED POST-

TRANSLATIONALLY BY THE RIMK ENZYME.

-I. MASS SPECTROMETRY: WW-15187. 2, METHOD-WALDI; RANGE=1-131.

-I. SIMILARITY: BELONGS TO THE $6P FAMILY OF RIBOSOMAL PROTEINS.

                                                                             Sequence 2. Application US/09150741

Parent No. 6183996

GRNERAL INFORMATION:

APPLICANT: Stewart et al.

ITILE OF INVENTION: Nucleotide Sequence Encoding Carbamoyl Phosphate

Patent No. 6183996

ITILE OF INVENTION: Nucleotide Sequence Encoding Carbamoyl Phosphate

Patent No. 6183996

ITILE OF INVENTION: Synthetase II

FILE REFERENCE:

CURRENT FILING DATE: 1998-09-10

EARLIER APPLICATION NUMBER: D10380

EARLIER PILING DATE: 1992-12-16

EARLIER APPLICATION NUMBER: A093/00617

EARLIER APPLICATION NUMBER: 08/446,855

EARLIER PILING DATE: 1995-07-06

NUMBER OF SEQ ID NOS: 15

COMMUNICATION DATE: 1995-07-06

RESULT 10

```
Sequence 15, Application US/09635872A

Patent No. 6534300

GENERAL INFORMATION:
HILLIAM

TITLE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOWAL HYDROLASES
FILE REFERENCE: 195613US0

CURRENT APPLICATION NUMBER: US/09/635,872A

CURRENT APPLICATION NUMBER: 60/153,831

PRIOR FILING DATE: 1999-09-14

NUMBER OF SEQ ID NOS: 52

SOFTWARE: Patentin version 3.0

SEQ ID NO 15

LENGTH: 908
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 19828, Application US/09252991A
Facent No. 6551795
GENERAL INFORMATION:
APPLICANT: MART OF
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERCHGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT FILING DATE: 1999-02-18

N;Contains: amyloid protein AA
C;Species: Equus caballus (domestic horse)
C;Date: 19-Nov-1988 #sequence_revision 12-Feb-1993 #text_change 17-Mar-1999
C;Accesion: A60430, A28573

been raised in vitro or in vivo in the presence and at the expense of an antigen presenting cell that presents the immunogenic compound in the control of adoptive immunotherapy comprising administering the immune the effector cell. The compounds are useful for modulating an immune response to the synthetic and naturally occurring compounds. The compounds are especially useful in gene therapy or as components of anti-cancer vaccines. The compounds are useful for treating cancer, particularly covarian cancer. The compounds are also useful for generating antibodies that specifically recognise and bind to these molecules. These antibodies are further useful for immunotherapy when administered to a subject. The peptides polypeptides and polymolectides are useful in diagnostic methods, for the detection and purification of antibodies, or as immunogens for the production of antibodies. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                The invention relates to compounds comprising an immunogenic ligand whose sequence is based in part on residues 42-50 of human cancer antigen ATF4/CREB-2 (not defined) and the polynucleotides encoding them. Also included are an antibody that specifically recognises and binds the compound, a method for inducing an immune responses in a subject by delivering the compound, a method of immunotherapy comprising administering to a subject the antibody, an immune effector cell that has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: Immunogenic ligands AAU74681-AAU74686 are stated to be encoded by the degenerate DNA sequences AAS20120-AAS20125 respectivel but have not been cross-referenced or CDS features put in due to the

                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher uevaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cancer antigen; ATF4; CREB-2; vaccine; cytostatic; immunogenic ligand; gene therapy; MHC; major histocompatibility complex; adoptive immunotherapy; cancer; ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to compounds comprising an immunogenic ligand whose sequence is based in part on residues 42-50 of human cancer antigen ATF4/CREB-2 (not defined) and the polynucleotides encoding them.
                                                                                                                                                                                                                                                                   (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ovarian

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The B. mori silkworm larvae derived (pro)phenoloxidases Phe52-Val693 (AAR89114) and Phe52-Cly685 (AAR89115), are encoded by AAT10240 and AAT10241, respectively. The (pro)phenoloxidases can be used as new labelling oxidases.
                                                                               insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (Pro)phenol:oxidase from silkworm - useful as a labelling oxidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Silkworm; larvae; pro; phenoloxidase; Phe52-Val693; Phe52-Gly685

                                                      administering to a subject the antibody, an immune effector cell that has been raised in vitro or in vivo in the presence and at the expense of an antigen presenting cell that presents the immunogenic compound in the context of an MHC (major histocompatibility complex) molecule and a method of adoptive immunotherapy comprising administering the immune effector cell. The compounds are useful for modulating an immune response to the synthetic and naturally occurring compounds. The compounds are especially useful in gene therapy or as components of anti-cancer vaccines. The compounds are useful for treating cancer, particularly ovarian cancer. The compounds are also useful for generating antibodies antibodies are further useful for immunotherapy when administered to a subject. The peptides, polypeptides and polymucherapy when administered to a subject. The peptides, polypeptides and polymucherapy when administered to a subject. The peptides, polypeptides and polymucherapy when administered to a subject. The peptides are useful in a special in a subject the peptides, polypeptides and polymucherapy when administered to a subject. The peptides are useful in a special in a subject the peptides of the subject the subje
  Also included are an antibody that specifically recognises and binds the compound, a method for inducing an immune response in a subject by delivering the compound, a method of immunotherapy comprising

G protein-coupled receptors termed nGPCR-x. nGPCR-x polynucleotides, and modulators may be used in the treatment of diseases and conditions such as infections, such as vival infections caused by HIV-1 (human immunodeficiency virus) or HIV-2, pain, cancers, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, annorexia, hypotension, hypertension, myocardial infarction, atherosclerosis), Parkinson's disease, and psychotic and neurological disorders, including schizophrenia, migraine, major depression, anxiety, mental disorder, manic depression, and dyskinesias, such as Huntington's disease or Tourette's Syndrome and many other diseases and syndromes listed in the specification. nGPCR-x polynucleotides and polypeptides, as well as nGPCR-x modulators, may also be used in diagnostic assays for such diseases or conditions. The present sequence represents a G protein-coupled receptor

The nGPCR-x can be used for screening compounds which can be used to treat mental disorders, thyroid disease, renal failure, inflammatory conditions such as Crohn's disease, rheumatoid arthritis, autoimmune disorders, schizophrenia, migraine, stroke, dementia, depression, Parkinson's disease, Alzheimer's disease, and Huntington's disease. They may also be used for treating viral infections such as human immunodeficiency virus (HIV), type 2 diabetes, obesity, anorexia, hypotension, hypertension, thrombosis, myocardial infarction,
                                                                                                                                                                                                                                                                                                                                                                   Human; mental disorder; thyroid disease; renal failure; anorexia; inflammatory condition; Crohn's disease; rheumatoid arthritis; HIV; autoimmune disorder; schizophrenia; migraine; stroke; dementia; obesity; depression; Parkinson's disease; Alzheimer's disease; viral infection; thuthington's disease; human immunodeficiency virus; type 2 diabetes; anorexia; hypotension; hypetension; thrombosis; myocardial infarction; atherosclerosis; cancer; sexual dysfunction; G protein-coupled receptor;
                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel nucleic acid and encoded nGPCR-x, used to screen for compounds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences are selected of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
atherosclerosis, cancer, and sexual dysfunction. AAU25617-AAU25726 represent the amino acid sequences of novel human G protein-coupled receptors, nGPCR-2031 to nGPCR-2140 respectively, as described in the

New therapeutic compounds comprising immunogenic ligands, useful for modulating an immune response, particularly for treating ovarian cancer, and as components of anticancer vaccines

```
The invention relates to compounds comprising an immunogenic ligand whose sequence is based in part on residues 42-50 of human cancer cantigon ATF4(FRB-2 (not defined) and the polynucleotides encoding them. Also included are an antibody that specifically recognises and binds the compound, a method for inducing an immune response in a subject by delivering the compound, a method of immunotherapy comprising candinistering to a subject the antibody, an immune effector cell that has been raised in vitro or in vivo in the presence and at the expense of an entigen presenting cell that presents the immunogenic compound in the context of an MHC (major histocompatibility complex) molecule and a method of adoptive immunotherapy comprising administering the immune response context coll. The compounds are useful for modulating an immune response of the synthetic and naturally occurring compounds. The compounds are useful for treating cancer, particularly covarian cancer. The compounds are also useful for generating antibodies that specifically recognise and bind to these molecules. These compounds context of antibodies are further useful for immunotherapy when administered to a subject. The peptides, polypeptides and polynicleotides are useful in diagnostic methods, for the detection and purification of antibodies. The sequence represents a human cancer antigen ATF4(CRB-2 based immunogenic interview) is an antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: Immunogenic ligands AAU74681-AAU74686 are stated to be encoded by the degenerate DNA sequences AA220120-AAS20125 respectively but have not been cross-referenced or CDS features put in due to the degeneracy of the DNA sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptides can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTS) for human secreted proteins expressed in prostate, and encode the proteins given in AAV171916 to AAV11993 respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used for producing secreted human gene therapy. The proteins obtained may have cytokine activity, cell prollferation and differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activity, anti-inflammatory
                                                                                                                                                                                             forensic; gene therapy; chromosome mapping; signal peptide; prostate; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated prostate-derived nucleic acids - used to develop products which may have cytokine, immune regulatory, haematopoiesis regulating, anti-inflammatory or tumour inhibition activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  directing extracellular secretion of a polypeptide or the insertion polypeptide into a membrane, or importing a polypeptide into a cell
                                                                                                                                                                        Human; secreted protein; EST; expressed sequence tag; diagnosis;

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens. The colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene the reatment of diseases associated with inappropriate postersion. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. The inactive proteins. N and P can be used in the prevention, diagnosis and AAB77789 represent of colorectal carcinomas and cancers. AAH37196 to AAH37204

Query Match Best Local Similarity 517 AA; N-PSDB; ABL10928 151 pharmaceutical WO200171042-A2 interactions -26-MAR-2002 27-SEP-2001, Sequence ABB66825; Query Match Sequence Matches Matches ABB66825 88888888 à 셤 Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, and the control of the invention, and methods of detecting the nucleotides, antibodies against the polypeptides of the invention. Although novel, many of the bind to polypeptides of the invention have homology to known proteins, thereby cylopeptides of the invention have homology to known proteins, thereby polypeptides of the invention have homology to known proteins, thereby cylopeptides of the invention have homology to known proteins, thereby cylopertial therapeutic applications. The polypeptides of the invention activities, including cytokine, cell proliferation or cell afferentiation activities, stem cell growth factor activity; immunomodulatory activity; tissue growth activity; immunomodulatory activity; activities, theomotic or chemokinetic activities, hambin-related activities, chemocatic or chemokinetic activities, hambin-related activities, chemocatic or chemokinetic activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions includes cande encoding them) may be used to promoce wound repair (or nucleic acide encoding them) may be used to promoce wound repair (or nucleic acide encoding them) may be used to promoce wound repairs and fungal infections and ulcers), while those with activity may be used in the treatment of viral, bacterial and fungal infections and ulcers), while the seq to promote cell growth. For example, such polypeptides may be used to neurcopithelial collustry. that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 egecification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Rose M,

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.w1po.int/pub/published_pct_sequences.

The present invention relates to the genome sequence of Listeria

monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of
it are useful for selecting probes and primers for detecting genes in L.

compocytogenes and related organisms, and for studying genes in L.

monocytogenes and related organisms, and for studying genes in L.

compocytogenes and related organisms, and for studying genetic

composition the genome sequence are useful for rataing specific

antibodies, identification of L. monocytogenes and related organisms, and

for biosynthesis and biodegradation, especially biosynthesis of Vitamin

compounds that regulate gene expression and cell replication

and modulate L. monocytogenes—related diseases. In addition, the genome

compositions for the treatment or prevention of infections by L.

compocytogenes and related organisms.

compocytogenes and related organisms of the printed

specification, but was obtained in electronic format directly from WIPPO
